

AMENDMENT

In the Claims:

Please amend the claims as follows:

Please replace the presently pending claims with the following claims:

1. (Amended) A method for inhibiting platelet aggregation in a mammal, comprising administering to the mammal an effective amount of adenosine.
2. (Amended) A method for inhibiting thrombosis in a mammal, comprising administering to the mammal an effective amount of adenosine.
3. (Amended) A method for preventing and treating thromboembolic disorders in a mammal, comprising administering to the mammal an effective amount of adenosine.
-
4. A method according to claim 3, wherein the thromboembolic disorders are selected from the group consisting of atherosclerosis and arteriosclerosis, acute myocardial infarction, angina, transient ischemic attacks and strokes, peripheral vascular diseases, arterial thrombosis, preeclampsia, embolism and carotid endarterectomy.
5. A method according to any one of claims 1 to 4, comprising administering to the mammal including human an effective amount of adenosine in association with an antithrombotic.
6. A method according to claim 5, wherein the antithrombotic is selected from the group consisting of coumarin, aspirin, heparin, LMW heparin, ticlopidine, hirudin, and thromboxane A₂ synthase inhibitors or receptor antagonists.

Please cancel claims 7-9.

10. (Amended) A pharmaceutical composition for inhibiting platelet aggregation in a mammal, comprising an effective amount of adenosine and a pharmaceutically acceptable carrier or diluent.

11. (Amended) A pharmaceutical composition for inhibiting thrombosis in a mammal, comprising an effective amount of adenosine and a pharmaceutically acceptable carrier or diluent.

12. (Amended) A pharmaceutical composition for treating thromboembolic disorders in a mammal, comprising an effective amount of adenosine and a pharmaceutically acceptable carrier or diluent.

13. A pharmaceutical composition according to claim 12, wherein the thromboembolic disorders are selected from the group consisting of atherosclerosis and arteriosclerosis, acute myocardial infarction, angina, transient ischemic attacks and strokes, peripheral vascular diseases, arterial thrombosis, preeclampsia, embolism and carotid endarterectomy.

14. A pharmaceutical composition according to any one of claims 10 to 13, further comprising an antithrombotic.

15. A pharmaceutical composition according to claim 14, wherein the antithrombotic is selected from the group consisting of coumarin, aspirin, heparin, LMW heparin, ticlopidine, hirudin, and thromboxane A₂ synthase inhibitors or receptor antagonists.

16. (Amended) A kit for inhibiting platelet aggregation and thrombosis in a mammal, comprising a first container containing adenosine and a second container containing a pharmaceutically acceptable carrier or diluent.

17. (Amended) A kit for inhibiting platelet aggregation and thrombosis in a mammal, comprising a first container containing adenosine, a second container containing an antithrombotic, and a third container containing a pharmaceutically acceptable carrier or diluent.

18. A kit according to claim 17, wherein the antithrombotic is selected from the group consisting of coumarin, aspirin, heparin, LMW heparin, ticlopidine, hirudin, and thromboxane A₂ synthase inhibitors or receptor antagonists.

Please add the following claims:

AA 19. (New) The method of any of claims 1-4, wherein the mammal is a human.

20. (New) The method of any of claim 5, wherein the mammal is a human.
